BE PART OF THE SOLUTION

Science based solutions
to global problems
in environmental
and agricultural
sustainability

CO-FUND

Co-funded by the Erasmus+ Programme of
the European Union

AN INTERNA- TIONAL MASTER

Students take the first
year in Copenhagen
and the second year
either in Milan or in
Warsaw

The world faces unprecedented problems – natural resources are disappearing, global value chains supply unsustainable products, standard agricultural production systems are outdated, millions live in poverty, and the severity of climate changes is escalating.

Do you want to contribute to solving these problems?

Are you looking for a master's programme combining theories with fieldwork?

Then the MSc programme in Global Environment and Development (MERGED) is your answer.

This elite two-year Erasmus Mundus Joint Master programme will enable you to handle today's global challenges concerning the sustainable use of natural resources and developing new agricultural production systems.

MERGED is a joint programme developed and implemented by universities in Denmark, Italy, and Poland.

The programme provides MERGED students with coordinated and direct access to high-quality teaching in Europe. And you can use the international research networks of the teaching staff – to find topics and supervisors – when you decide on your thesis topic.

The first year, all MERGED students are at the University of Copenhagen in Denmark. Besides the many field trips in individual modules, there is a joint spring school where you carry out interdisciplinary fieldwork using the knowledge and tools acquired in the classrooms.

In the second year, you choose between two specialisations:

- Sustainable Environmental Development at the University of Warsaw in Poland,
- Agricultural Development at the University of Milan in Italy.

For more information, visit www.merged.info.

You can read about the programme and partner universities, available scholarships, find application forms, etc.
